

Read in YAML guide

```
library(yaml)
yaml$ <- yaml::load_file("de.yaml")
sample1 <- yaml$sample1
sample2 <- yaml$sample2

sample1
```

```
## [1] "wtbmbr"
```

```
sample2
```

```
## [1] "wtbother"
```

Read in Data

Read in raw count data per gene.

```
counts <- read.delim("../sam2countsResults.tsv", row.names=1)

#check the file
head(counts)
summary(counts)
colnames(counts)
#need to convert NA to 0 counts
counts[is.na(counts)] <- 0
```

Subset per DE experiment

I am going to start by subsetting the particular treatments I am looking at.

```
colnames(counts)
```

```

```

Add column specifying library Group

Make a vector called group that will be used to make a new column named group to identify library region type.

```

group <- c(rep(sample1, count1Len), rep(sample2, count2Len))
d <- DGEList(counts=counts,group=group)

```

```
d$samples
```

```

##                group lib.size norm.factors

##  1     440
```

```
sig.genes <- rownames(results$table[results$table$FDR<0.05,]) # outputs just significant gene names
plotSmear(d,de.tags=sig.genes)
```

Subset by all the ones with a significant score

```
results.sig <- subset(results$table, results$table$FDR < 0.05)
```

What are the genes that are misexpressed? For this we need to add some annotation

Essentially we are merging two annotations files to 1.) only sig genes 2.) all genes

```
annotation1<- read.delim("../ITAG2.3_all_Arabidopsis_ITAG_annotations.tsv", header=FALSE) #Changed to
colnames(annotation1) <- c("ITAG", "SGN_annotation")
annotation2<- read.delim("../ITAG2.3_all_Arabidopsis_annotated.tsv")
annotation <- merge(annotation1,annotation2, by = "ITAG")

#Making the only significant gene table
results.sig$ITAG <- rownames(results.sig) #change row.names to ITAG for merging
results.sig.annotated <- merge(results.sig,annotation,by = "ITAG") #This is merging to only sig genes

#Making all table

results$table$ITAG <- rownames(results$table)
results.all.annotated <- merge(results$table, annotation,by = "ITAG")
```

Write table with results

```
write.table(results.all.annotated,"DE_all.txt",sep="\t",row.names=F)
write.table(results.sig.annotated,"DE_sig.txt",sep="\t",row.names=F)
```

```
library(rmarkdown) render("skeletonDE.Rmd", "pdf_document")
```
